

### **Tangled Paper Lanterns**

#### **Supplies:**

- Construction paper
- Toilet paper rolls
- Scissors
- Glue/tape/stapler
- Crayons, markers, or colored pencils
- Tea lights (optional)

#### **Steps:**

1. Cut the construction paper to fit the size of the toilet paper roll, we want enough to wrap all the way around it.
2. Glue or tape the paper on to the toilet paper roll, this will be the inside of your lantern.
3. Cut another piece of construction paper to fit around your toilet paper roll, this will be the outside of the lantern.
4. Decorate on side of the paper, you can add Tangled suns or your own design.
5. Fold the paper in half and draw lines 1 inch apart. Then cut upwards towards the edge. Leave an inch edge on the paper.
6. Unfold your paper, and glue/tape/staple it onto the outside of the roll.
7. Add a tea light inside the roll to make it glow!

### **Water Clock**

#### **Supplies:**

- Styrofoam or plastic cup
- Small bell
- Small plastic lid (example: a bottle cap or milk jug cap)
- String, yarn, or ribbon
- Toothpick (or something that can poke a hole, like a fork)
- Glass jar
- Popsicle stick or craft stick
- Bead (optional)

#### **Steps:**

1. Poke a hole through the middle of the plastic lid and the bottom of the Styrofoam or plastic cup.
2. Measure the distance from the top of the cup to just above the bottom of the cup with the string. Add an inch or two, and then cut the string.
3. Run the string through the hold you made in the plastic lid. To secure it, tie bead to one side of the string OR create a large knot if you don't have a bead.
4. Tie the small bell to the other end of the string.

5. Now measure, you want to make sure the string is short enough to pull the bell off the popsicle stick when the cup is empty. Adjust your knots as needed to make sure it's the proper length.
6. Place the cup on top of the jar. Place the popsicle stick over stop of the cup and balance the bell on the end of the string on the popsicle stick, while the lid hangs down into the cup. Hold it into place while you fill the cup with water.
7. The cap will float while the bell remains balanced on the popsicle stick
8. After adding the water, you will notice that the water starts to drip out the bottom of the cup into the jar. When the water drains out, the bells will be pulled into the cup. The sound of the bells acts as an alarm.
